

WJ-11L

Precision in Motion Excellence that Endures

Technology & Function

Head Size

Ø 8.2 x H 13.6 mm

Angle

Head at 90 °

Clear view starts at the top

The compact head design enhances intraoral visibility for more precise treatment.

Advanced processing equipment

High-precision 9- and 7-axis machines from Switzerland and Japan ensure high accuracy and stability in handpiece manufacturing.

Lightweight body, confident handling

Crafted with a high-quality copper alloy shell, it offers a well-balanced feel and outstanding structural strength. This ensures stable control and reliable performance during polishing and restorative procedures.

Vacuum titanium coating

Exceptional wear resistance with a premium metallic finish — built for lasting performance and refined control

High-precision bearings

Equipped with German Myonic bearings, the swing amplitude is less than 0.01 mm, ensuring precise and stable operation

Tested under a motor input speed of 4000 r/min to measure core oscillation amplitude

Efficient LED lighting

The contra-angle features LED fiber-optic lighting, delivering uniform illumination and a clear field of view for more precise and efficient procedures.

Low bur runout for enhanced stability

Precision engineering minimizes bur runout, ensuring improved device stability and operational accuracy.

Internal water channel design

Eliminate the hassle of external tubing — the built-in water channel ensures smoother polishing with instant on/off control and no extra installation required.

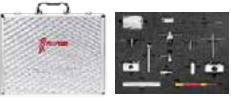

Modular detachable design for efficient maintenance

Innovative modular structure enables quick disassembly and replacement, greatly enhancing maintenance efficiency and reducing repair costs.
